B.O.D. Incubator

Introduction

A BOD Incubator (Biochemical Oxygen Demand Incubator) is a critical laboratory equipment used for maintaining controlled temperature conditions required for biological and microbiological testing. It plays a vital role in applications such as BOD analysis, microbial culture growth, enzyme reactions, and incubation studies.

MB Lab Pro Services BOD Incubators are designed to deliver accurate, uniform, and stable temperature control, ensuring reliable and repeatable test results in research, quality control, and environmental laboratories.

Product Overview

Our **BOD Incubators** are engineered using advanced temperature control technology and high-quality insulation to maintain consistent internal conditions over extended periods. These incubators are ideal for laboratories that require precise low-temperature incubation with minimal fluctuations.

Key Highlights

- **Precise Temperature Control**

Maintains stable low-temperature conditions for sensitive biological samples.

- **Uniform Air Circulation**

Ensures consistent temperature distribution throughout the chamber.

- **High-Quality Insulation**

Minimizes heat loss and improves energy efficiency.

- **User-Friendly Digital Controller**

Easy temperature setting, monitoring, and control.

- **Corrosion-Resistant Inner Chamber**

Stainless steel construction for long life and easy cleaning.

- **Silent & Vibration-Free Operation**

Ideal for continuous incubation studies.

Product Details

Parameter	Details
Usage	Laboratory / Environmental Testing / Water & Wastewater Analysis / Research
Color	White / Grey (Powder Coated / Stainless Steel)
Power Supply	Electric
Dimension	230V AC, 50 Hz (Single Phase)
Material	STD: SS 304 Inner & Powder-Coated MS Outer GMP: Full Stainless Steel 304
Warranty	1 Year

Thank You

Let's Build Reliable Testing Solutions Together

At MB Lab Pro Services, every BOD Incubator is manufactured with strict quality control standards to ensure accuracy, reliability, and durability. Our solutions help laboratories achieve dependable results while maintaining operational efficiency.
