Hot Air Oven

Introduction

A **Hot Air Oven** is an essential laboratory equipment used for dry heat sterilization, drying of glassware, metal instruments, and heat-stable materials. It ensures effective sterilization by circulating hot air at controlled temperatures for a specified duration.

MB Lab Pro Services Hot Air Ovens are designed to provide uniform temperature distribution, precise control, and reliable performance, making them ideal for pharmaceutical, medical, research, and industrial laboratories.

Product Overview

Our **Hot Air Ovens** are manufactured using high-quality materials and advanced heating technology to deliver consistent and accurate temperature control. The equipment is suitable for continuous operation and is engineered to meet the demanding requirements of regulated laboratory environments.

Key Highlights

- **Accurate Temperature Control**

Maintains stable and precise heating for effective sterilization.

- **Uniform Air Circulation**

Ensures even heat distribution throughout the chamber.

- **Stainless Steel Inner Chamber**

Corrosion-resistant, durable, and easy to clean.

- **High-Quality Insulation**

Minimizes heat loss and improves energy efficiency.

- **User-Friendly Digital Controller**

Easy temperature setting, monitoring, and operation.

- **Over-Temperature Protection**

Enhances safety during extended operations.

Product Details

Parameter	Details
Usage	Laboratory, Pharmaceutical, R&D, Quality Control, Industrial Testing, Educational Institutions
Color	Grey / White (Powder Coated) / Stainless Steel Finish
Power Supply	Electric
Dimension	As per selected model (refer Technical Data table)
Voltage	230 V AC, 50 Hz, Single Phase
Material	Inner chamber: SS 304 (Mirror Finish)
Warranty	1 Year
